COLOUR PRINTING FROM AN APPLE MAC
# TO THE FOLLOW ME Q

December 19, 2016

Printing colour from a MAC can be a little bit confusing. Each application has a different way of presenting the advanced printing options you need to tell the printer you want to print in colour. If you get completely stuck let the IS Service Desk know and they can help you out.

In your open document click *File* then *Print* and select the *Follow Me Q*. Depending upon the application you are working in you may need to click *Show Details*, *Advanced* or *More Options* to view the Xerox Features option.

Once you find it click *Xerox Features* to continue.

The new window should have a second drop down menu directly below Xerox Features. Select *Colour Options* and you will be presented with a number of colour settings. Choose Automatic or Vivid Colour and click *Print*.
